

# Unibrazed 80S-D2/90S-D2

## Classification:

AWS A5.28 / ASME SFA5.28 Class ER80SD2/ER90S-D2

## Description:

Unibrazed 80S-D2/90S-D2 is a mild steel solid wire that contains ½ percent molybdenum for increased strength and high levels of manganese and silicon to provide good wetting and good rust and scale tolerance. It will give radiographic quality welds with excellent bead appearance in both ordinary and difficult-to-weld carbon and low alloy steels. It is suitable for single and multiple pass welding of carbon and low alloy steels and higher strength steels in the as welded and postweld heat treated conditions. It exhibits excellent out of position characteristics with the short circuiting and pulsed arc processes.
